

# Specific Reference Types (`specrefs.dtx`)

Charles Duan

August 16, 2024

These reference types could fall under the umbrella `book` reference type, but it is helpful to include them to provide unique formatting and/or to save on data entry.

## **cjs: Corpus Juris Secundum**

### **Key Parameters:**

**vol:** The volume number.

**name:** The entry name.

**year:** The year of publication.

## **rfc: An IETF Request for Comments**

This reference type automatically adds the serial number, inline citation format, and URL based just on the RFC number.

### **Key Parameters:**

**author, name, year:** Bibliographic information for the RFC.

**number:** The RFC number.

Any book publication parameters described in `bookrefs.dtx` are also permitted.
