

Specific Reference Types (`specrefs.dtx`)

Charles Duan

May 3, 2023

These reference types could fall under the umbrella `book` reference type, but it is helpful to include them to provide unique formatting and/or to save on data entry.

cjs: Corpus Juris Secundum

Key Parameters:

vol: The volume number.

name: The entry name.

year: The year of publication.

rfc: An IETF Request for Comments

This reference type automatically adds the serial number, inline citation format, and URL based just on the RFC number.

Key Parameters:

author, name, year: Bibliographic information for the RFC.

number: The RFC number.

Any book publication parameters described in `bookrefs.dtx` are also permitted.
